

At MTS we take responsibility for our environmental footprint and believe it's every business's obligation to support environmentally sustainable initiatives. Our efforts towards a greener planet range from avid recycling in the office to the very nature of our product – m-View is used by many companies to reduce the need to travel, thereby dramatically cutting down the associated greenhouse gas emissions from cars and planes.

Recycling

Momentum is committed to recycling during the day-to-day running of our office.

- We recycle all paper products, plastic, glass and aluminium.
- We use recycled paper products wherever possible, including using paper that's made from a minimum of 80% recycled Australian paper for our office printing.
- We are conscious of using minimal packing supplies and we re-use boxes and post packs whenever possible.
- We re-use printer cartridges and donate all used computers, mobile phones, batteries and printer cartridges to Planet Ark or ensure they are responsibly recycled.
- We use rechargeable batteries to reduce harmful waste.
- We use locally manufactured, recyclable, re-usable cups for take-away coffees and drinks instead of filling our rubbish bins with empty take-away cups that would create an estimated 25kgs per year of landfill.

Saving energy

Momentum uses energy-saving light globes wherever possible and ensures that all computers and electrical equipment are turned off at night and on weekends to conserve energy.

Greenhouse gas emissions

To reduce the harmful emissions associated with doing business, Momentum chooses to offset greenhouse gas emissions from flights when travelling, and we buy Australian-made, local products if possible to limit the emissions produced by travel and freight.

Our ongoing commitment

We believe that we can continue to take environmentally friendly action through creative ideas from our team, partners and clients and have a commitment to continually reducing our environmental footprint.
