

m-View Mobile

Unparalleled mobility

M-VIEW
TECHNOLOGY PLATFORM

m-View Mobile allows you to broadcast live video from any m-View enabled mobile phone, for a truly on-the-go solution. It transforms handheld devices into wireless video broadcasting and viewing powerhouses.

PRODUCT FEATURES

- Share live video and audio with suppliers, colleagues and specialists
- Instant communication from field workers back to base and/or other viewers
- Real-time GPS tracking of live video
- Cost-effective solution for a mobile workforce
- Video stream can be viewed on a range of devices, including mobiles, PCs, laptops and command centre screens
- Snapshot feature for high-quality stills
- Send alerts via SMS or email to viewers, inviting them to join the video session
- Chat facility to enable better and instant communication between all parties
- Videos can be reviewed post-event for training, analysis and evidence
- Allows multiple concurrent remote viewers
- Optimised for the 3G network

► The m-View advantage

m-View is a world-first, award-winning technology developed by an Australian company. It gives you live, high quality video with a variety of features and benefits.

m-View Mobile matches mobility with functionality to empower workers in the field and the office.

m-View can help you:

- Make better decisions, faster
- Gain instant access to experts
- Connect people through live video and audio
- Reduce costs – travel expenses, training, downtime and maintenance costs
- Improve inter-branch, inter-state or international collaboration
- Maximise the productivity of specialist staff through virtual consultations
- Perform diagnostic and maintenance tasks remotely
- Review archived videos for training, analysis and/or evidence
- Overcome geographical boundaries
- Effectively manage risk and improve safety measures.

► How it works

The m-View suite of products provides an integrated hardware and software solution, allowing users to stream live video from anywhere, to anyone.

Hardware

m-View Mobile can be teamed with a range of mobile phones. Currently, this includes Windows Mobile, BlackBerry and Symbian S60 phones and will soon be expanded to iPhones.

Software

m-View Broadcaster captures, compresses and streams the video footage via a wireless internet connection, most commonly a 3G network.

The **m-View Server** receives, processes and routes sound and vision to multiple viewers. m-View Server also receives and routes command and control information from viewers.

The **m-View Viewer** allows viewers to access and manage multiple video streams via a standard web browser or through a range of mobile devices such as mobile phones, laptops and netbooks. Viewers can also use the chat feature and take and save still snapshots from the video stream.

All video sessions, snapshots, text and GPS coordinates are saved on the m-View Server for review and can be tagged with key words for easy searching, retrieval and future collaboration.

► m-View platform

m-View captures, compresses and streams video footage via a wireless internet connection, most commonly a 3G network.

► m-View Mobile at work

m-View Mobile has many applications in the health, emergency services, remote technical support and mining industries. It's currently being used by a range of clients to conduct virtual medical consultations, stream live video from the frontlines of emergencies, and enable other business-critical activities.
