

MEDIA BACKGROUND

Momentum Technologies Solutions is the Australian creator of the multi award-winning m-View – a completely mobile, live video-streaming solution.

About m-View

m-View is a software system that enables live, wireless video streaming from anywhere to anyone, easily and reliably. Video can be broadcast from an m-View enabled mobile phone or a range of video cameras (including specialised cameras like infra-red, microscopes and PTZ (pan, tilt, zoom) cameras) for viewing on any computer, PDA or mobile phone.

Products

A suite of customisable products has been built on the m-View platform:

- **m-View Mobile** for broadcasting and viewing from mobile phones, and to control cameras remotely;
- **MAVEO** for remotely managed portable video (e.g. in vehicles and planes/helicopters); and
- **m-View GoPack** for video surveillance on the go.

Applications

mView is currently being used by a wide variety of clients and industries, from emergency services (such as fire-fighting, disaster response and law enforcement) and field services to e-health. Below are more details on two m-View applications.

Fighting fires

m-View is currently being used to help the fire-fighting efforts in Victoria, New South Wales, Queensland, Tasmania and California. Momentum's m-View technology streams multiple video feeds to the decision-makers and other key stakeholders.

- **Live video is streamed from the air**, via fire-spotting aircraft and water bombers. Viewers watch a fire's progress in real time and can also instantly see the effect of fire retardant on an advancing fire-front.
- **Live video is streamed from the ground**, via a fleet of m-View enabled mobile phones.

e-health

m-View is being used for remote consultations and knowledge sharing in the healthcare industry. For example, Tasmania's Department of Health and Human Services is providing remote medical consultations to patients in rural areas using m-View and Telstra Country Wide's Next G network. The doctor's office is virtual – a regional nurse in the patient's home takes live video footage using an m-View enabled mobile phone, while the doctor and/or health professionals logon for the remote consult in real-time.

About Momentum

Momentum Technologies Solutions is a privately held streaming media company that is the leading provider of **live, mobile video communications** solutions in Australia. Its award-winning system [m-View](#) is deployed for a range of applications to help users **make better decisions, faster**. For more information, visit www.momentumgroup.com.au
